Childhood cavities are more common than asthma. Infection from tooth decay can lead to other health problems, but tooth decay is preventable.

KEEP YOUR CHILD HEALTHY

The American Dental Association recommends yearly checkups for children. If your child has not seen a dentist in the past 12 months, this program is for you! Without regular dental checkups your child may be at risk for:

- Early tooth loss caused by dental decay
- Gum and heart disease
- Speech problems

EASY & CONVENIENT

When your child sees the in-school dentist, you save time. Local, Georgia licensed dentists and hygienists provide care from our fully equipped mobile offices. Dental care at school includes a complete exam, x-rays, cleaning, fluoride (SDF), sealants and cavity treatment when needed.

NO COST TO YOU

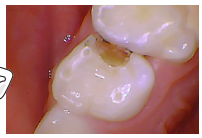
If your child is insured with Medicaid / PeachCare for Kids®, there is no cost to you. We also accept most private dental plans.

Silver Diamine Fluoride (SDF) - A new dental treatment to fight cavities

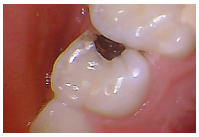
Fluoruro Diamino de Plata (SDF) - Un nuevo tratamiento dental para combatir las caries

BENEFITS OF SDF: Dental cavities are common in children, but now our dentists have a safe, painless alternative to traditional cavity drilling procedures called silver diamine fluoride (SDF). SDF is an FDA-approved antibiotic liquid used to help prevent cavities from forming, growing, or spreading to other teeth. The dentist simply brushes SDF on back teeth only.

BENEFICIOS DE SDF: Las caries dentales son comunes en los niños, pero ahora nuestros dentistas tienen una alternativa segura, sin dolor a los procedimientos tradicionales de perforación de caries llamado fluoruro diamino de plata (SDF). SDF es un líquido antibiótico aprobado por la FDA que se usa para ayudar a prevenir la formación, crecimiento o propagación de caries a otros dientes. El dentista simplemente cepilla SDF solo en los dientes posteriores.



Cavity / Carie



SDF applied / SDF aplicado

Alternatives / Alternativas

- No treatment: The tooth may continue to decay and cause pain.
- Other options: fluoride varnish, a filling or crown, or extraction of the tooth.

- Sin tratamiento: el diente puede seguir deteriorándose y causar dolor.
- Otras opciones: barniz de fluoruro, relleno o corona, o extracción del diente.

Risks

- SDF treatment may not eliminate the need for a traditional filling.
- It's normal for SDF to stain the cavity brown or black–it means it's working.
- The healthy parts of the tooth will not be stained.
- SDF can cause temporary staining if it comes into contact with skin. The stain is harmless and should disappear in less than a week.
- SDF may cause a temporary metallic taste.

Riesgos

- Es posible que el tratamiento SDF no elimine la necesidad de un relleno tradicional.
- Es normal que el SDF manche la carie de color marrón o negro, lo que significa que está funcionando.
- No se mancharán las partes sanas del diente.
- El SDF puede causar manchas temporales si entra en contacto con la piel. La mancha es inofensiva y desaparecerá en menos de una semana
- SDF puede causar un sabor metálico temporal.
