I understand and authorize Michigan Dental Outreach, P.C. (Provider), its affiliated dentists or dental hygienists, to provide dental services at school to the above named child for whom I am the custodial parent or legal guardian, including an exam, oral hygiene instruction, cleaning, fluoride, sealants, x-rays and the application of Silver Diamine Fluoride as needed. I consent to the Provider sending text messages about the school dental program. I acknowledge that text messaging is not a secure form of communication and presents additional privacy risks. This signed consent authorizes my child's initial and future dental visits. I may withdraw this consent at any time in writing.

Silver Diamine Fluoride (SDF) - A new dental treatment to fight cavities

BENEFITS OF SDF: Dental cavities are common in children, but now our dentists have a safe, painless alternative to traditional cavity drilling procedures called silver diamine fluoride (SDF). SDF is an FDA-approved antibiotic liquid used to help prevent cavities from forming, growing, or spreading to other teeth. The dentist simply brushes SDF on back teeth only.

Alternatives

- No treatment: The tooth may continue to decay and cause pain.
- Other options: fluoride varnish, a filling or crown, or extraction of the tooth.

Risks

- SDF treatment may not eliminate the need for a traditional filling.
- It's normal for SDF to stain the cavity brown or black—it means it's working.
- The healthy parts of the tooth will not be stained.
- SDF can cause temporary staining if it comes into contact with skin. The stain is harmless and should disappear in less than a week.
- SDF may cause a temporary metallic taste.
